JOURNAL OF THE IRON AND STEEL INSTITUTE

VOLUME 170 1952

SUBJECT INDEX

[References to papers and articles given in full text are indicated by the word (*Paper*) following the page number.

Indexing of Alloy Steels and Other Alloys: In the indexing of alloy steels, carbon and iron are ignored and the alloying elements contained in the steel are arranged in alphabetical order; for example, all references to nickel–chromium–molybdenum steel will be found under the heading chromium–molybdenum–nickel steel. In the indexing of other alloys, carbon and iron when present, are included in the title; iron when present is always mentioned first and the other elements follow in alphabetical order, carbon being in all cases mentioned last. Examples: "Iron–silicon–carbon alloys" and "iron–chromium–nickel–carbon alloys."]

Abrasives, coated, 297 ; coated standardization, 297 ; corn-cob grits, 297 ; silica-type for sand blasting, 391

Absorptiometric Analysis, determination of chromium in iron and steel, 268 (*Paper*) ; principles, 182

Adhesion, Araldite and Redux to metals, 390 ; assessment in electroplating, 297 ; cobalt enamels to iron sheet, 298 ; enamels to iron sheet, 298

Africa, mineral resources in Bechuanaland, 379 ; kyanite deposits, 379

Ageing, effect of cold work, 78 ; mild steel, 301 ; strain effects, 301 ; strain, of pressure-vessel steels, 301 ; weld, effect of hot working, 73

Air, determination of lead compounds in, 182 ; measurement of infiltration in open-hearth, 149 (*Paper*)

Aircraft Parts, exhaust-pipe ceramic coatings, 298 ; propeller extrusion, 71, 172 ; temporary corrosion preventives, 85

Aircraft Steel, 81, 397 ; centrispun die castings, 293

Algoma Steel Corp., blast-furnace inwall rebuild, 164

Allegheny Ludlum Steel Corp., continuous-casting pilot plant, 383

Alloy Phases, equations of state, 83 ; spectrographic analysis, 309

Alloy Steel, aircraft, 397 ; austenite transformation, 307 ; cerium additions, 396 ; in chemical engineering, 304 ; creep-resisting, 302, 303 ; effect of boron, 397 ; effect of hydrogen, 80 ; forging automobile parts, 171 ; for gas turbines, 295 ; for light structures, 397 ; low-temperature properties, 305 ; physical and mechanical properties of segregates, 221 ; structural, in Czechoslovakia, 397 ; substitution by nodular iron, 306 ; weldability and mechanical properties, 73

Alloy Structure, superlattice formation, 307

Alloys, aluminium–beryllium, 169 ; aluminium–silicon stress/strain, 178 ; chromium-base for gas turbines, 304 ; chromium–cobalt–tantalum properties, 304 ; chromium–nickel plating on copper undercoats, 391 ; chromium–silicon as grey-iron addition, 385 ; copper–tin plating, 297 ; iron–aluminium–chromium in Russia, 80 ; iron–aluminium–silicon cores, 393 ; iron–carbon, magnetic analysis, 248 ; iron–carbon phases in heat-treatment, 386 ;

Alloys—*continued*
iron–chromium embrittlement at 885° F., 79 ; iron–chromium sigma-phase tetragonality study, 307 ; iron–chromium–molybdenum phase diagrams, 307 ; iron–chromium–molybdenum sigma phase, 307 ; iron–chromium–tungsten phase diagrams, 307 ; iron–chromium–vanadium phase relationships, 83 ; iron–cobalt–vanadium constitution and properties, 83 ; iron–nickel cubic texture, 77 ; iron–nickel, effect of molybdenum on Young's modulus, 80 ; iron–nickel ferromagnetics and superlattice, 301 ; iron–nickel magnetic properties, 305 ; iron–nickel powder, magnetic susceptibility, 305 ; iron–silicon, carbon metallography in, 232 ; iron–silicon transformer sheet electrical properties, 322 ; iron–silicon–carbon carbide phase, 237 ; iron–zinc in hot-dip galvanizing, 392 ; nickel–tin electrodeposition, 76, 297 ; tin-zinc coating, corrosion tests, 181

Alumina, effects in blast-furnace slags, 164 ; refractories, 64, 65, 292

Aluminium, bonding to iron and steel, 166 ; casting in large permanent mould, 385 ; determination in iron ore and steel, 398 ; determination in Ti-bearing steels, 181 ; effect in killed steel, 68 ; effect in zinc plating, 392 ; hot deep drawing, 71 ; in non-ageing mild steel, 301 ; plastic deformation, 300 ; underground corrosion, 308

Aluminium Alloys, hot deep drawing, 71

Aluminium–Beryllium System, diffusion in, 169

Aluminium–Silicon Alloy, stress/strain, 178

American Cast Iron Co., centrifugally cast pipe, 168

American Foundrymen's Association, metal-penetration testing, 69 ; scabbing tests, 69

American Metal Cutting Tool Institute, tolerances for unground hobs, 175

Analysis, 85, 181, 308, 398 ; absorptiometric determination of chromium in iron and steel, 268 (*Paper*) ; absorptiometric principles, 182 ; colorimetric determination of aluminium, 181 ; colorimetric determination of aluminium in iron ore and steel, 398 ; colorimetric determination of iron, manganese, etc., 181 ; colorimetric determination

Analysis—*continued*
of metal ions in liquid wastes, 181 ; photometric determination of copper, 85 ; photometric determination of lead in iron ores, 310 ; photometric determination of molybdenum and tungsten, 85 ; photometric determination of potassium in fertilizer, 182 ; potentiometric determination of carbon, 85 ; spectrographic accuracy, 308 ; spectrographic, of alloy phase, 309 ; spectrographic, British Group, 309 ; spectrographic calibration line drift, 309 ; spectrographic, carbons for, 308 ; spectrographic correction factors, 309 ; spectrographic determination of boron by quantometry, 309 ; spectrographic determination of segregates, 182 ; spectrographic, German Group, 309 ; spectrographic, hollow cathode for, 309 ; spectrographic, Italian Group, 309 ; spectrographic microphotometry, 309 ; spectrographic reading head, 309 ; spectrographic, of refractory materials, 65 ; spectrographic spark-source triggering, 309 ; spectrographic, of stainless steels, 309 ; spectrographic, Swiss Group, 309 ; spectrographic, temperature excitation in arc, 309 ; spectrophotometric determination of silicon, 182 ; vacuum-fusion determination of hydrogen, 85, 182

Analysis of, alloy phase, 309 ; gas by Orsat apparatus, 85 ; phosphate coatings on steel, 19 (*Paper*) ; producer gas, 182 ; refractory materials by spectrography, 75 ; stainless steel by spectrography, 309

Analysis Methods, 84

Annealing, aspects, 167 ; cyclic, of forgings, 170 ; plant, 295

Annealing Furnaces, induction, for bars, 386 ; low, for wire, 170

Appleby-Frodingham Steel Co., all-carbon blast-furnace, 139; melting-shop trials, 383 ; sintering, 123 ; supply and use of hydraulic power, 271 (*Paper*) ; water supply and treatment, 286 (*Appendix*)

Arc Furnaces. *See* Electric Furnaces

Arc Welding. *See* Welding

Argentina, charcoal blast-furnace, 381

Armco Steel Corp., ELC stainless steels, 302 ; scrap-charging hoists, 67

Associated Electrical Industries, induction-

Associated Electrical Industries—*continued* heating equipment for metallurgical research, 86
Atomic-Energy Establishment, radio-isotope techniques in metallurgy, 86
Austenite, carbon diffusion in, 83 ; effect of alloying elements on breakdown at sub-zero temperatures, I (*Paper*) ; grain-size control, 179 ; grain-size determination, 398 ; retained, effect of decomposition in tempering, 81 ; retained, effects, 81 ; retained, tempering in iron–carbon alloys, 248 ; transformation in alloy steels, 307 ; transformation applications, 83; transformation in chromium steel, 82 ; transformation in undercooling, 82
Australia, iron-ore mining at Cockatoo Island, 63 ; nitriding, 70
Austria, iron-ore mining, 66 ; iron and steel development plan, 66 ; iron and steel works, 66 ; magnesite-brick making, 64
Automobile Industry, coach painting, 298 ; gear-steel selection and heat-treatment, 70
Automobile Parts, axle-housing stampings, 171 ; axle-shaft heat-treatment, 70 ; billet heating, 169 ; brake- and clutch-pedal forging, 71 ; camshaft properties, 68 ; crankshaft machining, 390 ; cylinder blocks from cast Cr–Si, treated iron, 385 ; forged alloy-steel, 171 ; forging, 387 ; heat-treatment, 70, 386 ; infra-red drying, 298 ; infra-red drying and stoving, 76 ; king-pin fracture study, 81 ; seat-spring mechanical handling, 295 ; selective hardening, 170 ; shaft surface hardening, 386
Azed, Inc., depolarization, 391

Baker (W. A.) and Co., Ltd., castings cooling system, 385
Basalt Rock Co., pipe fabrication, 173
Beams, welded, plastic behaviour, 174

Pickling, 75, 176, 296, 391 ; accelerators, 176 ; bath concentration, 75 ; effect on machinability, 175 ; electrolytic, hydrogen diffusion in, 296 ; inhibitors action, 75 ; inhibitors assessment, 176 ; inhibitors, halides, 176 ; rod coils, 75 ; stainless steel, 391
Pickling Liquor, waste, treatment, 75, 296
Pig Iron, desulphurization with ground lime, 66 ; desulphurization with solid lime, 66 ; determination of carbon and sulphur, furnaces for, 310 ; mottled, 69 ; in open-hearth, 67 ; partial blowing, 138 ; production, 65, 163, 292, 380 ; production with cement in rotary furnace, 164 ; production costs in U.S.A., 107 ; production in electric furnace, 65, 164 ; production in low-shaft furnace with lignite, 65 ; production from iron pyrites, 167 ; world production in 1949, 310
Pipelines, corrosion, 308 ; corrosion study by electrolytic probe, 84 ; corrosion surveys by surface-potential method, 181 ; water, cathodic protection, 398 ; water, tuberculation mechanism, 389 ; water, tuberculation prevention, 398
Pipes, cast iron, 308 ; cast-iron, corrosion, 308 ; centrifugal casting processes, 168 ; centrifugal casting in sand-lined moulds, 385 ; ceramic coatings, 298 ; Cr–Mo–V steel for, 396 ; continuous heat-treatment, 169 ; fabrication plant, 173 ; iron and steel, corrosion, 308 ; steel, in gob-filling, 170 ; stocking and shipping, 86 ; tar-dip coating, 392 ; residual stresses in, 389
Piston Rings, locomotive, tube standards for, 306
Pittsburgh Steel Co., patenting plant, 391
Plasticity, 178 ; dislocations in crystals, 178
Plastics, special steels for industry, 306
Platinum, powder, 393
Poland, blast-furnace-slag utilization, 164
Polishing, coated abrasives for, 297 ; electrolytic. *See* Electrolytic Polishing ; phosphate coatings in, 76 ; stainless steel by coated abrasives, 297
Potassium, determination in fertilizers, 182
Powder Metallurgy, 76, 299, 393 ; in ammunition production, 77 ; atomization of metals, 76 ; binding cements, 393 ; coated powders, 299 ; compacting by hydraulics, 299 ; copper-impregnated iron, 76 ; design in, 76 ; development, 299 ; in domestic appliances, 77 ; feed-volume determination, 299 ; for gas-turbine alloys, 299 ; gases in compacting, 76 ; in gear production, 77, 300, 393 ; for heat-resisting materials, 393 ; hot coining, 393 ; infiltration techniques, 393 ; iron–aluminium–silicon cores, 393 ; iron cores, 77 ; iron production from mill scale, 299 ; iron-sinter nitriding, 299 ; iron-sinter properties, 393 ; iron welding electrodes, 296 ; particle-size analysis, 299 ; photomicrography in, 299 ; plating sintered parts, 297 ; platinum, 393 ; research, 299 ; rolling powder strip, 389 ; Sendust cores, 393 ; shell bands, 77, 299 ; shell parts, 77 ; sintered carbide. *See* Sintered Carbides ; sintering mechanism, 299 ; tungsten carbide. *See* Tungsten Carbide
Precision Casting, foundry for, 168 ; gas-turbine blades, 293 ; gas-turbine nozzle vanes, 293 ; lost-wax, 168 ; of machine components, 69 ; material-saving aspects, 168 ; small parts, 385
Presses, crank, 71 ; heavy, transport, 71
Pressing, 71, 171, 294, 387 ; cold, 171 ; tool maintenance, 387
Pressure Vessels, effects of fabrication methods on steels, 394 ; fabrication, 174 ; fusion-welded, British Standard Code, 73 ; hydrogen embrittlement, 396 ; pressure tests, 73 ; steel strain-ageing, 301 ; steel transitions, 394 ; welding, 174
Producer Gas, analysis, 182 ; comparison with fuel oil, 292
Pryor (Edward) and Son, Ltd., heat-treating stamps, punches, and dies, 386
Pumps, design and application in iron and steel works, 360 (*Paper*)
Punches, heat-treatment, 386
Pyrometers, foundry, 163 ; immersion, 163 ; immersion, conference, 162 ; immersion and optical compared, 162 ; immersion, period, 64 ; immersion, for steel-temperature control in bath and ladle, 64 ; immersion, in steelworks, 162 ; Leeds and Northrup, 163 ; optical, for flame-hardening temperatures, 163 ; radiation, in reheating furnaces, 163 ; resistance thermometers, 380 ; surface, 163

Quality Control, data presentation, 80 ; foundry, 166, 169 ; in special-steel making, 382
Quenching, for austenite decomposition, 81 ; mechanism, 170 ; media assessment, 170 ; oil, 71, 171 ; "rotten-wood" cracks in Cr–Mo steel, 398 ; salt-bath characteristics, 169 ; steel bars, 70 ; work of Le Chatelier, 71

Radio-Active Isotopes, applications, 182 ; in blast-furnace gas-transit-time study, 65, 163 ; in blast-furnace refractory-wear indication, 65, 193, 163 ; foundry applications, 294 ; in friction and lubrication study, 72 ; lead-distribution study in stainless steel, 85 ; in metallurgy, 86, 399 ; in testing, 304
Radiography, film intensification, 305 ; gamma, 305 ; gamma, apparatus, 305 ; gamma, of welds, 80 ; micro, absorption, 179 ; techniques for steel castings, 80 ; of weldments, 395 ; xero, 305
Rails, gas-welded, strength, 175 ; spread in rolling, 172 ; surface hardening, 169
Railway Wagons, coal, report of service trials from 1939–1950, 84 ; for iron ore, 379 ; tippers, 173 ; wheel-fracture stresses, 301 ; wrought-steel wheels, 397
Railways, equipment crack detection by magnetics, 301
Recuperators, 162
Redheugh Iron and Steel Co. (1936), Ltd., pressure-vessel fabrication, 174
Refractory Materials, 64, 163, 292 ; blast-furnace, in U.S.A., 99 ; blast-furnace, wear study by radio isotopes, 65, 163, 139 ; converter, 137 ; cupola, sprayed, 293 ; deformation and disintegration, 163 ; density determination by dilatometer, 65 ; effect of preliminary gassing, 65 ; gas-turbine, 292 ; glaze cracking and recrystallization, 65 ; ladle, 163, 292 ; in ladles and mixers, 165 ; for open-hearth bottoms, 382 ; open-hearth and electric-furnace, 163 ; open-hearth and ladle trials, 65 ; pressing phenomena with silico-alumina pastes, 65 ; spectral excitation of powders, 65 ; steelworks, 163
Refractory Materials (Alumina), effect of preliminary gassing, 65 ; properties as gas-turbine material, 292 ; sintered crucibles, 64
Refractory Materials (Carbon), all-carbon blast-furnace, 139
Refractory Materials (Chrome-Magnesite), comparison with silica bricks, 163
Refractory Materials (Chromite), unsuitability of Transvaal ores, 68
Refractory Materials (Dolomite), uses in iron and steel making, 165
Refractory Materials (Ethyl Silicate), 65
Refractory Materials (Forsterite), 64
Refractory Materials (Magnesia), ramming mixes for open-hearths, 65
Refractory Materials (Magnesite), production, 64
Refractory Materials (Mullite), distinguishing from sillimanite, 163
Refractory Materials (Silica), effect of preliminary gassing, 65
Refractory Materials (Silica Brick), alternation with basic brick in open-hearth roofs, 165 ; comparison with chrome magnesite, 163 ; in open-hearth and electric furnaces, 163
Refractory Materials (Sillimanite), distinguishing from mullite, 163 ; in metal mixers, 65
Refractory Materials (Zirconia), 65 ; development, 65 ; fusion and purification in electric furnace, 65 ; properties and uses, 65
Reheating Furnaces, rotating-hearth, 294 ; temperature measurement by radiation pyrometers, 163
Republic Steel Corp., jet tapping, 67 ; wire processing, 72
Research, Cr–Mo steels, 302 ; cranes for steelworks, 295 ; dust-reduction, 385 ; foundry, 383, 385 ; gas-turbine-blade materials, 396 ; gas-turbine materials, 302 ; high-temperature alloys, 304 ; low-shaft blast-furnace, 65 ; machining of gas-turbine metals, 296 ; metallurgical, 398 ; open-hearth flow, 67 ; powder-metallurgy, 299
Resins, metal bonding with Araldite and Redux, 290 ; phenolic, as coatings, 392
Rheology, high-temperature, of metals, 396
Rigby (J.) and Sons, Ltd., powder-metal gears, 300
Rivets, manufacturing industry, 387
Rod, depolarizing agents in cleaning, 391 ; mill, 388 ; pickling, 75
Rolling, 72, 172, 295, 388 ; adhesion of steel particles to rolls, 389 ; cold, forged and hardened cylinders for, 171 ; cold, magnetic-alloy strip, 72 ; cold, stainless steel, 72 ; cold strip, 172, 295, 389 ; cold, theory and practice, 172 ; cold, thin strip, 72 ; continuous-gauge control, 72 ; flat, pressure distribution between stock and rolls, 347 (*Paper*) ; friction, 388 ; force calculation, 172 ; non-destructive testing, 388 ; powder strip, 389 ; rails, lateral spread, 172 ; sheet-thickness gauging by X-rays, 172 ; theories, 172, 388 ; tubes, 72 ; by water power, 172
Rolling Mills, 72, 172, 295, 388 ; bar, cooling beds, 72 ; bearing maintenance, 173 ; blooming, electrical equipment, 388 ; British and American practices, 388 ; building architecture, 310 ; buildings in France, 399 ; cast-steel stands, 284 ; cold sheet, 295 ; delivery speeds, 295 ; electric-motor maintenance, 295 ;

Rolling Mills—*continued*
electric reversing motors, 388 ; electrical distribution systems, 72 ; electrical drives at Margam and Abbey, 72 ; electrical equipment, 388 ; electrical low-inertia motors, 172 ; electrical-overload limitation, 172 ; inspection, 389 ; mechanical aids, 295 ; pilger, for tubes, 72 ; rod, 388 ; at Schoeller-Bleckman Stahlwerke, 172 ; Sendzimir, for cold magnetic-alloy strip, 72 ; Sendzimir, for cold stainless steel, 72 ; slitting and levelling equipment, 295 ; strip, at Fontana, 72 ; strip, at Jemeppe, 389 ; strip, at Linz, 295 ; tube, welding in, 174 ; water-driven plant, 172 ; wire, 388

Rolls, chilled-iron, production, 168 ; design for pilger process, 72 ; forged and hardened, for cold rolling, 171 ; grinding devices, 389 ; pressure distribution in hot and cold flat rolling, 347 (*Paper*) ; small-diameter, for wire, 388

Rotary Electric Co., automatic grinding, 390

Rupture, constraint-vector concept, 394 ; effect of residual stress on resistance, 300 ; probability determination under creep, 79

Russell (S.) and Sons, Ltd., foundry plant, 385

Russia, blast-furnace slag for road blocks, 164 ; cast-steel trolley wheels, 384 ; coal utilization, 63 ; core mixes and drying, 384 ; heat-resisting alloys, 80 ; iron and steel works maintenance, 173 ; nodular-iron developments, 383 ; open-hearth process at Magnitogorsk, 382 ; slag-wool production, 164 ; standard steel-casting nomenclature, 385 ; toolmaking industry, 75

Ryan Aeronautical Company, ceramic-coated exhausts, 298 ; forging-hammer practice, 171

Salt Baths, 385 ; control for high-speed steel, 169 ; in forging, 386 ; quenching characteristics, 169 ; salts for, 169

Sampling, coal, 162 ; coal by single increment, 380 ; coke for moisture determination, 310 ; dust-laden gases, 64 ; statistical aspects, 87

Scaffolding (Great Britain), Ltd., aluminium spraying, 298

Scaling, in gas-turbine metals, 307

Schoeller-Bleckman Stahlwerke, A.G., rolling-mill plant, 172

Scrap, charging hoists, 67 ; charging from large box, 67 ; cutting, 175 ; galvanized, zinc recovery from, 297 ; tool-steel, 165 ; yard storage, 292

Segregates, physical and mechanical properties in alloy steels, 221 ; spectrographic determination in steel, 182

Sendzimir Galvanizing, 392

Sendzimir Rolling Mills, for cold magnetic strip, 72 ; for cold stainless steel, 72

Shafts, axle, heat-treatment, 70 ; hardening machine, 386

Shearing, centralized lubrication in, 72 ; electrical control, 295 ; equipment, 295 ; spot-weld resistance, 73 ; tensile, calculation in spot welds, 300

Sheet, continuous-gauge control in rolling, 72 ; fabrication, 71 ; galvanized, life, 180 ; galvanizing in U.S.A., 392 ; heat-resisting alloy, welding, 296 ; iron, cobalt-enamels adherence, 298 ; iron enamels adherence, 298 ; silicon-steel, varnish insulation, 76 ; thickness gauging by X-rays, 172

Sheet Steel, cold rolling, 295 ; Shotton works, 66

Sheffield University, crank press, 71

Shells, forging, 171, 387 ; powder-iron bands, 77 ; powder-metal bands, 77, 299 ; powder-metal parts, 77

Shelton Iron, Steel and Coal Co., Ltd., open-hearth combustion trials, 47

Sherardizing, iron and steel, 392

Ships, cleavage fracture in plates, 300 ; "mothballing," 180 ; welding, 74

Shot Peening, effectiveness determination, 179

Siemens (Sir) Charles W., work, 86

Sigma Phase, in cast austenitic steels, 306 ; in cast Cr–Ni steel, 306 ; in Cr steel, 82, 306 ; in Cr–Ni steels, 82, 306, 307 ; effect on corrosion of stainless steel in HNO_3, 308; effect of prior treatment on precipitation, 180 ; effect on stainless weldments, 306 ; electrolytic etching for, 81 ; formation and identification in Cr–Ni steels, 307 ; in heat-resisting steels, 82 ; high-temperature effect in Cr–Ni steel, 306 ; in iron–chromium–molybdenum alloys, 307 ; in stainless steels, 82 ; tetragonality in Fe–Cr system, 307 ; X-ray study in alloy systems, 307

Silica, desulphurizing effect in blast-furnace slags, 163 ; determination by colorimetry, 181

Silicon, determination in steel by spectrophotometry, 182

Sillimanite. *See* Refractory Materials

Sinter, effects of controlled variables on quality, 123 ; rotary cooler, 380

Sintered Carbides, die reconditioning, 172 ; drawing dies, 172 ; economic advantages for tools, 393 ; production, 293 ; production in Germany, 393 ; for sand-blasting nozzles, 391 ; technique changes, 393

Sintering, 123 ; at Bethlehem Steel Co., 63 ; effect of suction, 380 ; Northants ore, 123 ; theoretical basis, 380

Sintering Plant, efficiency investigations, 161 ; at National Tube Co., 161 ; trials, 123

Slag Wool, in U.S.S.R., 164

Slags, blast-furnace, effects of alumina, 164 ; blast-furnace, effects of Mn and MnO, 163 ; blast-furnace, effects of SiO_2 reduction, 163 ; blast-furnace foamed, 164 ; blast-furnace granulated, 164 ; blast-furnace, instability, 164 ; blast-furnace, mineralogy, 66 ; blast-furnace, use as binders, 164 ; blast-furnace, use in building industry, 164 ; blast-furnace, use as fertilizer, 164 ; blast-furnace, use in Poland, 164 ; blast-furnace, use in road making, 164, 381 ; blast-furnace, in wool form, 164 ; constitutional aspects, 66 ; crushing-strength determination, 381 ; electric-furnace, reactions with chromium, 165 ; open-hearth acid, 67 ; open-hearth, chromium reactions, 165 ; open-hearth fertilizer, determination of potassium in, 182 ; open-hearth, granulating, 165 ; open-hearth, manganese and iron recovery, 381 ; treatment and use, 66, 164, 381

Smidth Agglomerating Kiln, 123

Soaking Pits, 70, 169, 294, 385 ; operation, 169 ; practice, 70 ; track time, 70

Société Anonyme d'Espérance Longdoz, strip mill, 389

Solidification, grey iron in sand moulds, 294 ; tests for liquid steel, 21 (*Paper*) ; vertical, in ingots, 166 ; white iron in green-sand moulds, 294

South Africa, chromite ores of Transvaal, 68 ; coking-coal tests, 63 ; titanium ore, 379 ; Vanderbijl Park works, 66

South African Iron and Steel Industrial Corp., Ltd., works at Vanderbijl Park, 66

Spain, nodular-iron possibilities, 293

Special Steels, gas-turbine, 303 ; jet-engine, 302 ; nitriding, 294 ; for plastics industry, 306 ; quality control, 382
